Report Overview

L-glufosinate Ammonium TC, also known as Phosphinothricin, is a synthetic, broad-spectrum herbicide belonging to the class of amino acid herbicides. It is derived from the natural product phosphinothricin tripeptide, which is produced by certain strains of *Streptomyces* bacteria. L-glufosinate Ammonium targets and inhibits the enzyme system that synthesizes essential amino acids in plants, leading to the cessation of protein synthesis and ultimately causing plant death. This herbicide is widely used in agriculture for pre-emergence and post-emergence control of various weed species, and it is also a key component in some genetically modified crops that are resistant to its effects, allowing for selective weed control without harming the crop. The product is typically formulated as a technical grade concentrate, which is then diluted and applied according to specific application rates and methods.

In 2024, the global L-glufosinate Ammonium TC market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
