### Report Overview

A Laboratory Air Jet Sieve is a specialized piece of equipment used in laboratories for particle size analysis and classification of powders and granular materials. This device operates by utilizing a high-velocity air stream to fluidize the sample, allowing particles to be separated based on their aerodynamic properties. The sieve consists of a series of sieves with decreasing mesh sizes, through which the air-particle mixture passes. Larger particles are retained on the sieves with larger mesh sizes, while smaller particles pass through to the sieves with smaller mesh sizes. The Laboratory Air Jet Sieve is designed to provide accurate and repeatable results, making it an essential tool for quality control in various industries, including pharmaceuticals, chemicals, and food processing. It is particularly useful for samples that are difficult to sieve using traditional mechanical sieve shakers, such as cohesive or fibrous materials.
