### Report Overview

The global laboratory mice and rats market is a critical segment of the biomedical research industry, driven by the widespread use of these animals in preclinical studies for drug development, disease modeling, and genetic research. These rodents are preferred due to their genetic similarity to humans, short reproductive cycles, and adaptability to controlled laboratory environments. The market is segmented into inbred, outbred, genetically modified, and immunodeficient strains, each serving specific research needs. Key applications include oncology, immunology, neurology, and toxicology, with pharmaceutical and biotechnology companies, academic institutions, and contract research organizations (CROs) as primary end-users. Growth is fueled by increasing R&D investments in personalized medicine, the rising prevalence of chronic diseases, and advancements in genetic engineering technologies like CRISPR. However, ethical concerns and stringent regulatory frameworks governing animal testing pose challenges. North America dominates the market due to robust biomedical research infrastructure, while Asia-Pacific is emerging as a high-growth region due to expanding pharmaceutical outsourcing and government support for life sciences. Leading suppliers include Charles River Laboratories, The Jackson Laboratory, Taconic Biosciences, and Envigo, which focus on strain diversification, pathogen-free breeding, and improved animal welfare standards to meet evolving research demands.
