Report Overview

Lactose-N-Neotetraose, also known as LNT or 6'-sialyllactose, is a complex carbohydrate molecule that consists of a lactose core with an additional N-acetylneuraminic acid (Neu5Ac) residue attached to the 6' position of the galactose sugar. This compound is a type of human milk oligosaccharide (HMO), which are unique to human milk and play a crucial role in infant nutrition and health. Lactose-N-Neotetraose is particularly important for its potential prebiotic effects, as it serves as a substrate for beneficial gut bacteria, promoting their growth and supporting the development of a healthy gut microbiome. It also has been shown to have potential immunomodulatory properties, contributing to the infant's immune system development. In the context of infant formula and dietary supplements, Lactose-N-Neotetraose is often included to mimic the composition of human milk and provide similar health benefits to those obtained from breastfeeding.
