Report Overview

Laser Cutting Gantry is a precision machinery system designed for cutting various materials using a high-powered laser beam. This system typically consists of a robust gantry structure, which houses the laser source, a CNC (Computer Numerical Control) motion control system, and a cutting head that directs the laser beam onto the material. The gantry moves along a set of linear rails or guides, allowing for precise, controlled motion in both the X and Y axes. The product is widely used in industries such as metalworking, woodworking, plastics, and textiles for cutting, engraving, and marking applications. Laser Cutting Gantry systems are valued for their accuracy, speed, and the ability to create complex shapes and designs with minimal material waste.
