Report Overview

The Laser Fork Light Barrier is a sophisticated safety device designed to prevent collisions between forklifts and pedestrians or other vehicles in industrial settings. This product employs advanced laser technology to create a virtual barrier that, when breached, triggers an alarm or halts the forklift's movement. The system typically consists of a laser transmitter and a receiver unit, which are strategically positioned to cover the designated area. The laser beam emitted by the transmitter is detected by the receiver, and any interruption of the beam signifies an intrusion into the protected zone.
