### Report Overview

A laser non-polarizing beamsplitter is an optical device used to split a laser beam into different light intensities. Unlike polarizing beamsplitters, laser non-polarizing beamsplitters do not selectively split or adjust the polarization state of the beam. It divides the laser beam into different light intensities but does not change the polarization direction or polarization state of the beam. Laser non-polarizing beamsplitters are commonly used in laser experiments, optical measurements, and other applications that require splitting and adjusting laser beams. They help researchers and engineers achieve precise control and adjustment of laser beams.
