Report Overview

A Laser Therapy System is a medical device that utilizes focused beams of light, specifically lasers, to deliver therapeutic effects on tissues. It operates on the principle of photobiomodulation, where light energy is absorbed by cellular chromophores, leading to a series of photochemical reactions that stimulate cellular functions. This system is designed to promote healing, reduce inflammation, and alleviate pain by enhancing the body's natural healing processes. It is commonly used in various medical fields, including dermatology, physical therapy, and veterinary medicine, for treating conditions such as wounds, musculoskeletal disorders, and neurological issues. The system typically consists of a laser source, a delivery mechanism to direct the light to the target area, and a control unit to regulate the intensity, duration, and frequency of the treatment sessions.
