Report Overview

Latanoprost for Chronic Angle Closure Glaucoma is a pharmaceutical product specifically designed to manage intraocular pressure in patients diagnosed with chronic angle closure glaucoma. This condition is characterized by a gradual buildup of pressure within the eye, which can lead to optic nerve damage and potential vision loss if left untreated. Latanoprost is a prostaglandin analog that functions by increasing the outflow of aqueous humor, the fluid within the eye, thereby reducing the intraocular pressure. It is typically administered as a topical eye drop and is part of a broader glaucoma management strategy that may include other medications, laser treatments, or surgical interventions. The product's efficacy is based on its ability to target the prostaglandin FP receptor, which helps in facilitating the drainage of aqueous humor through the trabecular meshwork and uveoscleral pathways, ultimately lowering the risk of vision impairment associated with chronic angle closure glaucoma.
