Report Overview

Lead-acid battery AGM separators are advanced, high-performance separators specifically designed for use in Absorbent Glass Mat (AGM) lead-acid batteries. These separators play a crucial role in maintaining the battery's performance and longevity by providing an efficient barrier between the positive and negative plates, preventing direct contact and short-circuiting. They are made from a special blend of glass fibers and synthetic materials, which are designed to be highly absorbent, allowing them to retain a significant amount of electrolyte. This feature ensures that the battery plates are always in contact with the electrolyte, even during high discharge rates, which is essential for maintaining the battery's capacity and performance. AGM separators are known for their excellent mechanical strength, chemical stability, and low internal resistance, which contribute to the overall reliability and efficiency of lead-acid batteries in various applications such as automotive, renewable energy storage, and backup power systems.
