Abstracts

Leaky feeder coaxial cable is a type of coaxial cable that has been specially designed to radiate radio waves along its length. This is achieved by making small slots or holes in the outer shielding of the cable. The radio waves from the cable's inner conductor leak out through these slots or holes and propagate into the surrounding space. Leaky feeder coaxial cable is typically used in underground mine communication systems, where it is used to provide radio coverage to miners working in tunnels and other underground areas. It is also used in other applications such as railway tunnels, road tunnels, and subways. The market growth is attributed to the increasing demand for underground communication systems in the mining, railway, and construction industries. The mining industry is the largest consumer of leaky feeder coaxial cable, accounting for over 50% of the market share in 2022. The increasing demand for coal, iron ore, and other minerals is driving the growth of the mining industry, which is in turn fueling the demand for leaky feeder coaxial cable. The railway industry is another major consumer of leaky feeder coaxial cable. The increasing investments in railway infrastructure development in emerging economies, such as China, India, and Brazil, are driving the demand for leaky feeder coaxial cable in the railway industry. The construction industry is also a significant consumer of leaky feeder coaxial cable. Leaky feeder coaxial cable is used in construction sites to provide radio coverage to workers and to monitor the progress of construction projects. The growing construction industry in emerging economies is driving the demand for leaky feeder coaxial cable.

The global Leaky Feeder Coaxial Cable market size was estimated at USD 2006.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
