## Abstracts

LED electromagnetic compatibility testing refers to the process of testing and evaluating the performance of LED lighting products in the electromagnetic environment. LED products emit electromagnetic radiation when working and are also very sensitive to external electromagnetic interference. Therefore, electromagnetic compatibility testing is required to ensure the normal operation of the product in the electromagnetic environment. LED electromagnetic compatibility testing mainly includes two aspects: radiated electromagnetic compatibility testing and conducted electromagnetic compatibility testing. By testing and evaluating indicators such as electromagnetic radiation and conducted interference of LED products, it is judged whether the product complies with relevant standards and regulations. Doing so can ensure the reliability and stability of LED products in the electromagnetic environment, while also ensuring the legitimacy and reliability of the products in the market.

The global Led Electromagnetic Compatibility Testing market size was estimated at USD 380.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
