Abstracts

The left-sided double-lumen bronchial tube, also known as the Carlen tube, is a special endotracheal tube. The left-sided double-lumen bronchial tube is a bifurcated endotracheal tube with two separate lumens, one for ventilation and one for suction, or to isolate the left lung from the right lung. This catheter is designed to be inserted into the patient's left main bronchus to support specific medical operations, such as thoracic surgery, lung surgery, or ventilation management for critically ill patients. The left double-lumen endobronchial catheter is widely used in the medical field, especially in surgeries that require single-lung isolation technology, such as pneumonectomy, lobectomy, bronchial surgery, etc. In addition, the catheter can also play an important role in the ventilation management of critically ill patients, effectively maintaining the patient's ventilation status and improving ventilation quality.

The global Left Sided Double Lumen Endobronchial Tube market size was estimated at USD 145.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
