Report Overview

A Level 2 Electric Vehicle (EV) Charger is an advanced charging station designed to provide faster charging capabilities for electric vehicles compared to standard Level 1 chargers. It typically utilizes a 240-volt power supply, which is similar to the voltage used for electric clothes dryers or water heaters in residential settings. This higher voltage allows for a more efficient transfer of energy, enabling the charger to deliver up to 25 miles of range per hour of charging, significantly quicker than Level 1 chargers that offer about 2-5 miles of range per hour. Level 2 chargers are often installed in commercial and public locations, as well as in private homes with the necessary electrical infrastructure. They are equipped with a J1772 connector, which is the most common charging standard in North America, ensuring compatibility with a wide range of EV models. The installation of Level 2 chargers can support the growing demand for electric vehicle charging and contribute to the expansion of sustainable transportation solutions.
