Report Overview

A lighted anoscope is a medical device designed for examining the anal canal and rectum, typically used by healthcare professionals such as gastroenterologists, proctologists, and primary care physicians. It consists of a hollow tube with a light source, allowing for better visualization of internal tissues, aiding in the diagnosis of conditions like hemorrhoids, fissures, polyps, or other abnormalities. The device may be disposable or reusable, with variations in design, such as fiber-optic illumination or battery-powered LED lights, to enhance clarity and ease of use. Lighted anoscopes are essential tools in both clinical and surgical settings, offering a minimally invasive way to assess anal and lower rectal health while improving patient comfort compared to traditional non-illuminated models.
