Electric-powered wheelchair is a wheelchair that is propelled by means of an electric motor rather than manual power. Motorized wheelchairs are useful for those unable to propel a manual wheelchair or who may need to use a wheelchair for distances or over terrain which would be fatiguing in a manual wheelchair. They may also be used not just by people with "traditional" mobility impairments, but also by people with cardiovascular and fatigue-based conditions. Lightweight electric folding wheelchair usually use lithium batteries and aerospace titanium-aluminum alloy frames. Lighter than traditional electric wheelchairs, easier to fold and carry. Increasing geriatric population and prevalence of chronic diseases leading to increasing number of people with disabilities, encouraging hospitals and medical institutions to use electric wheelchairs to improve the welfare of patients and healthcare workers is expected to remain the major driving factor for the market studied.
