Report Overview

Ligustrazine Phosphate API (Active Pharmaceutical Ingredient) is a synthetic derivative of tetramethylpyrazine, a compound originally derived from the Chinese herb *Ligusticum chuanxiong*. It is primarily used in cardiovascular and cerebrovascular treatments due to its vasodilatory, antiplatelet, and microcirculation-improving properties. The API functions by inhibiting platelet aggregation, reducing blood viscosity, and enhancing blood flow, making it a key component in medications for conditions like ischemic stroke, coronary heart disease, and peripheral vascular disorders. As a pharmaceutical-grade raw material, its production adheres to strict regulatory standards (e.g., GMP, FDA, or EMA compliance) to ensure purity, efficacy, and safety in downstream formulations such as injections, tablets, and capsules. The market for Ligustrazine Phosphate API is closely tied to the demand for cardiovascular drugs, particularly in regions with aging populations and high prevalence of circulatory diseases, such as China and other Asian markets where traditional medicine integration is prominent. Growth is further influenced by increasing R&D investments in novel drug delivery systems and expanding therapeutic applications beyond its traditional uses.
