Abstracts

Liquid acid concentrate for hemodialysis is a specially formulated solution used during the hemodialysis process to help clean the blood of patients with kidney failure. It contains essential electrolytes like sodium, potassium, calcium, magnesium, and chloride, as well as an acid component, typically acetic acid or citric acid, which helps to maintain the proper pH balance. When mixed with bicarbonate concentrate and purified water in the dialysis machine, it creates a dialysis solution that closely mimics the composition of normal blood plasma. This solution helps remove waste products and excess fluids from the blood, balancing electrolytes and maintaining proper pH levels, which is crucial for patients with impaired kidney function.

The global Liquid Acid Concentrate For Hemodialysis market size was estimated at USD 750.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
