Abstracts

The liquid argon cryogenic storage tank is a device used to store and transport liquid argon. Liquid argon is a liquid form of argon gas cooled to extremely low temperatures (-185.9 degrees Celsius), because argon gas is colorless, odorless, and non-toxic at room temperature. Liquid argon cryogenic storage tanks usually adopt a double-layer structure. The inner layer is a sealed container for storing liquid argon, and the outer layer is an insulation layer to reduce heat conduction and maintain low temperature. The storage tank is usually equipped with liquid level gauges, pressure control systems and other equipment to monitor and control the storage status of liquid argon.

The global Liquid Argon Cryogenic Storage Tank market size was estimated at USD 185.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
