## Abstracts

Liquid Cooling EV Charging Pile Module is an electric vehicle (EV) charging module that uses liquid cooling technology for heat dissipation. It is the core component of a supercharging station or a high-power DC fast charging pile, which can efficiently convert electrical energy and provide stable charging output. Compared with traditional air-cooled modules, liquid cooling technology can significantly improve heat dissipation efficiency, increase charging power density, and reduce module size, making charging piles more compact and reliable. Liquid-cooled charging technology has become an important trend in high-power fast charging, especially with the popularization of 800V high-voltage platform electric vehicles, liquid-cooled charging pile modules are gradually becoming the mainstream of the industry. Liquid-cooled charging pile modules use liquid-cooled high-efficiency heat dissipation solutions and wireless decomposition solutions, and are applied to super DC charging pile systems. Liquid-cooled charging technology has become an important trend in high-power fast charging, especially with the popularization of 800V high-voltage platform electric vehicles, liquid-cooled charging pile modules are gradually becoming the mainstream of the industry. The main players in the global liquid-cooled charging pile module include Infypower, UUGreenPower, TELD, Tonhe Electronics Technologies, Huawei, etc. Chinese companies have made rapid technological progress and their market share has grown rapidly.
