Report Overview

A liquid cooling switch is a type of switch equipment that uses liquid cooling technology for heat dissipation. Typically, liquid cooling switches use an independent cooling system to transfer heat generated from the equipment to a water-cooled plate through a liquid cooler, and then carry the heat away through a pipeline to achieve the purpose of heat dissipation. Compared to traditional air-cooled systems, liquid cooling switches can provide higher heat dissipation efficiency and lower noise, effectively reducing energy consumption and maintenance costs in data centers. Liquid cooling switches are often used in high-performance computing, artificial intelligence, big data, and other high-density computing scenarios, and are an important trend in the development of data center technology.
