Abstracts

High energy density: The energy density of liquid hydrogen is much higher than other hydrogen storage methods, allowing liquid hydrogen on-board storage tanks to provide longer cruising range. **High storage efficiency:** The density of liquid hydrogen at normal temperature and pressure is very small, but after liquefaction at low temperature, the volume is reduced by nearly 200 times, making the storage efficiency very high. **Environmental protection:** Liquid hydrogen is made from hydrogen gas through cooling and pressurization. Its combustion product is water. It has no pollution and no greenhouse gas emissions. It is a very environmentally friendly energy source.

The global Liquid Hydrogen On Board Storage Tank market size was estimated at USD 345.67 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
