Report Overview

Liraglutide API, or Active Pharmaceutical Ingredient, refers to the pure chemical compound liraglutide in its raw, unformulated state. Liraglutide is a glucagon-like peptide-1 (GLP-1) receptor agonist, which is a class of medications used primarily for the treatment of type 2 diabetes. It works by mimicking the action of a natural hormone called GLP-1, which is released by the intestine in response to food intake. This mimicry helps to stimulate insulin secretion, suppress glucagon secretion, and slow down gastric emptying, thereby improving blood sugar control. As an API, liraglutide is the key component that pharmaceutical manufacturers use to create the final dosage form of the medication, such as injections or other delivery systems, for administration to patients. The quality, purity, and stability of the API are critical factors that influence the safety and efficacy of the final drug product.
