Abstracts

Lithium batteries are the latest evolution of battery power, offering several use cases for ship owners. Lithium-ion batteries can be used as backup power, supporting the operating profile of a ship, including maintaining Dynamic Positioning (DP) systems. They can enable ships to run in zero emissions mode, when batteries temporarily function as the only source of electricity. This limits GHG emissions, enabling ships to comply with strict port requirements and travel in environmentally controlled areas (ECA). Additionally, batteries can be used for ?peak shaving?, taking over from onboard generator sets to deliver the peak load of energy.

The global Lithium Batteries For Electric Ships market size was estimated at USD 348.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
