Abstracts

Lithium battery thermal laminating machine is one of the mainstream lamination machines. It thermally laminates the baked positive and negative electrode sheets and separators, then rolls them, cuts them into composite units and then laminates them. Compared with the Z-shaped lamination machine, the biggest feature of the thermal laminating machine is that it can completely slice and stack the positive electrode, negative electrode and separator at one time, which improves the lamination efficiency and the quality of the pole core, and the technical difficulty is higher.

The global Lithium Battery Thermal Laminating Machine market size was estimated at USD 285.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Lithium Battery Thermal Laminating Machine market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
