Abstracts

At present, the stacking technology routes of lithium-ion batteries are mainly divided into four categories: zigzag stacking, cutting and stacking, hot composite stacking and rolling and stacking. Among them, zigzag stacking and cutting and stacking are essentially zigzag stacking, which is also the most widely used stacking process in China; the biggest feature of hot composite stacking is to achieve one-time complete slicing and stacking of positive electrode, negative electrode and diaphragm, which effectively improves the quality and production rate of stacking and battery cells, and is relatively more technically difficult; LG New Energy, for example, adopts rolling and stacking, which is more efficient but protected by LG patents.

The global Lithium Battery Z Fold Stacking Machine market size was estimated at USD 320.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
