Report Overview

Lithium Disilicate Ceramic, also known as LS2 or e.max, is a type of dental ceramic material used in the fabrication of dental restorations such as crowns, veneers, and bridges. It is composed of lithium oxide, silica, and other trace elements, which provide exceptional strength, durability, and esthetics. This material is valued for its ability to replicate the natural appearance of teeth due to its translucent properties, which allow it to mimic the light transmission and scattering characteristics of dental enamel. Additionally, lithium disilicate ceramic offers high flexural strength, making it suitable for anterior and posterior applications, and it can be milled to precise specifications using CAD/CAM technology. Its biocompatibility and resistance to wear contribute to its popularity in restorative dentistry, providing patients with long-lasting, natural-looking results.
