Abstracts

Lithium Manganese Oxide (LiMn_2O_4), often abbreviated as LMO, is a compound used as a cathode material in lithium-ion batteries. It is known for its unique three-dimensional spinel structure, which allows for fast lithium-ion diffusion, contributing to high power output. LMO batteries typically have a lower energy density compared to other lithium-ion chemistries, meaning they store less energy per unit weight. This makes them less suitable for applications where long battery life is critical but ideal for high-power applications such as power tools, electric vehicles, and certain portable electronic devices.

The global Lithium Manganese Oxide For Battery market size was estimated at USD 1520.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
