Abstracts

The LNG gasification pressure regulating skid is a piece of equipment used for the storage and transportation of liquefied natural gas (LNG). It mainly consists of LNG storage tanks, vaporizers, pressure regulators, etc. The working principle of the LNG gasification pressure regulating skid is to extract liquid natural gas from the storage tank, gasify it through the gasifier, and convert it into gaseous natural gas. Then, the pressure of the gaseous natural gas is regulated through a pressure regulator so that it reaches a pressure suitable for transportation and use. Finally, the gaseous natural gas is transported to the destination through pipeline transportation or gas transportation vehicle transportation.

The global Lng Gasification Pressure Regulating Skid market size was estimated at USD 285.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
