Report Overview

Low Ammonia Latex Concentrate is a specialized product derived from natural rubber, specifically designed to have a reduced ammonia content. This product is primarily used in the manufacturing of various latex-based goods, such as gloves, balloons, and other rubber products. The low ammonia content in the concentrate is a significant feature, as it reduces the strong ammonia odor typically associated with latex products, making it more suitable for applications where odor control is important. Additionally, the reduced ammonia content can also contribute to improved product quality and user comfort. The concentrate is produced through a controlled process that ensures the ammonia level is kept to a minimum while maintaining the desired properties of natural rubber, such as elasticity and durability. This product is particularly valuable in industries where latex products are in high demand and where the reduction of ammonia emissions is a priority for environmental and health reasons.
