Report Overview

Low Carbon Cold Heading Steel is a type of carbon steel characterized by its low carbon content, typically ranging from 0.10% to 0.30% carbon by weight. This specific composition allows the steel to be easily formed and shaped at room temperature through a process called cold heading, which involves compressing the material into a desired shape without the need for heat. The low carbon content ensures good ductility and formability, making it suitable for manufacturing fasteners, screws, bolts, and other small metal components that require precise dimensions and high strength. Additionally, Low Carbon Cold Heading Steel offers excellent machinability and weldability, which further enhances its utility in various industrial applications. The steel's properties, such as tensile strength, yield strength, and hardness, can be tailored to meet specific performance requirements through heat treatment and other processing techniques.
