Report Overview

Low-Equivalent Series Inductance (ESL) Multilayer Ceramic Capacitors (MLCCs) are a type of electronic component that store electrical energy in an electric field. These capacitors are designed with a low equivalent series inductance, which minimizes the inductive reactance at high frequencies, allowing for better performance in high-speed applications. MLCCs consist of multiple layers of ceramic material and conductive electrodes, which are alternately stacked and co-fired to create a compact, high-capacitance device. They are widely used in various electronic devices, such as smartphones, computers, and automotive electronics, due to their small size, high reliability, and ability to operate over a broad temperature range. The low-ESL characteristic of these MLCCs makes them particularly suitable for applications requiring high-frequency response and fast charge/discharge capabilities.
