Abstracts

A Low Level Wind Shear Alert System (LLWAS) is a ground-based system used to detect wind shear and associated weather phenomena, such as microbursts, close to an airport; especially along the runway corridors. This information can then be passed, in real-time, to warn pilots and aerodrome services. Low Level Wind Shear is defined as a sudden change of wind velocity and/or direction in either the vertical or horizontal planes. At low level, i.e. when aircraft are departing from or landing at an aerodrome, wind shear can present a severe risk to flight safety. Therefore, timely warnings are essential to help pilots respond appropriately.

The global Low Level Wind Shear Alert Systems market size was estimated at USD 285.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.65% during the forecast period.
