Report Overview

Low α -D-Glucopyranan Cellulose Dissolving Pulp is a high-quality, specialized type of cellulose pulp derived from wood fibers. It is characterized by its low α -cellulose content, which is crucial for its specific applications. This type of pulp undergoes a chemical treatment process that selectively removes lignin and hemicellulose, leaving behind a high purity cellulose product. The low α -cellulose content indicates a higher degree of purity and a more uniform fiber structure, which is essential for the production of cellulose derivatives such as viscose, cellulose acetate, and other specialty chemicals. These derivatives are used in a wide range of industries, including textiles, pharmaceuticals, and food additives. The product is valued for its strength, solubility, and reactivity, making it suitable for advanced manufacturing processes that require high-performance materials.
