### Report Overview

Low- $\alpha$  spherical silica powder is a specialized high-purity silica material with controlled alpha particle emissions, engineered for use in advanced semiconductor packaging and electronic applications where radiation-induced soft errors must be minimized. Its spherical morphology ensures optimal flowability and packing density, making it ideal for underfill materials, epoxy molding compounds, and high-performance substrates in 3D IC packaging, flip-chip technologies, and other precision electronic components. The material is characterized by ultra-low alpha emission rates (typically below 0.002 counts/cm<sup>2</sup>hr), achieved through stringent purification processes and raw material selection, addressing the escalating demand for reliability in next-generation computing, automotive electronics, and aerospace systems where even minimal radiation can disrupt nanoscale circuitry.
