Abstracts

The low-pressure carbon dioxide fire extinguishing system is developed based on the principle of the high-pressure carbon dioxide automatic fire extinguishing system. It stores the carbon dioxide fire extinguishing agent in a liquid form in a storage container with thermal insulation structure. The temperature of the carbon dioxide in the storage tank is always maintained at -20°C~-18°C and the pressure is maintained at about 1.9~2.1Mpa through the refrigeration unit. . When a fire occurs, a series of actuators will deliver liquid carbon dioxide to the fire scene and release it through the nozzle.

The global Low Pressure Co2 Fire Suppression System market size was estimated at USD 125.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
