Report Overview

A Low Pressure Metering Box is a specialized device utilized in the field of fluid control systems, particularly in applications involving gases or low-pressure liquids. It is designed to accurately measure and control the flow rate of a fluid by maintaining a consistent pressure downstream of the device. The metering box typically consists of a chamber where the fluid is directed, and it employs a metering orifice or valve to regulate the flow. This ensures that a precise amount of fluid is dispensed over a given period, which is crucial in processes requiring exact dosing, such as in chemical mixing, pharmaceutical manufacturing, or environmental monitoring. The low pressure aspect of the device indicates that it is suitable for use in systems where the pressure does not exceed certain limits, making it a versatile component in various industrial and scientific applications.
