The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low Resistance PPTC Resettable Fuse competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low Resistance (Low Rho) Surface Mount PPTC (Polymer Positive Temperature Coefficient) devices provide overcurrent protection for applications where ultra low internal resistance, ultra low voltage drop, and automatic resettable protection are desired. This new series allows a higher hold current device in a smaller factor and lower profile as compared to a standard PPTC. It offers ultra low internal resistance while maintaining the high level electrical characteristics and performances of standard PPTC products. In 2024 the production was 83.3 million units and the average price was \$1.2 per unit. Low resistance PPTC resettable fuses are protection components that utilize the polymeric positive temperature coefficient characteristic to rapidly increase resistance under overcurrent conditions, automatically interrupting the circuit, and resetting automatically once the temperature returns to normal.

The global Low Resistance PPTC Resettable Fuse market size was estimated at USD 100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
