## Abstracts

Low Temp Lead-Containing Glass Powders refer to finely ground glass particles that contain lead and are designed to melt at relatively low temperatures. These powders are commonly used in various applications such as ceramics, coatings, and sealants, where a low melting point and lead content are desirable. The lead content aids in reducing the melting point of the glass, allowing it to fuse at lower temperatures compared to traditional glass compositions. This makes it suitable for applications where energy efficiency and precise control over melting temperatures are essential, such as in electronic packaging or artistic glasswork.

The global Low Temp Lead Containing Glass Powders market size was estimated at USD 380.65 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
