Report Overview

A Low Temperature Thermosetting Structural Adhesive is a type of adhesive that is designed to provide strong, durable bonds at lower temperatures, typically below 100°C. It is a two-component system, consisting of a resin and a hardener, which react upon mixing to form a thermosetting polymer. This adhesive is characterized by its ability to withstand high mechanical stress, provide excellent adhesion to various substrates, and maintain its structural integrity over a wide range of temperatures and environmental conditions. It is commonly used in industries such as automotive, aerospace, and electronics for bonding metal, plastic, and composite materials in applications where high strength and durability are required. The low temperature curing process allows for energy efficiency and compatibility with temperature-sensitive materials, making it an ideal choice for applications where high-temperature curing processes are not feasible.
