Abstracts

Lysosomal storage diseases (LSD) are a group of hereditary metabolic diseases. They are caused by genetic mutations that cause defects in acid hydrolases in lysosomes. As a result, the corresponding biological macromolecules in the body cannot be degraded normally and are stored in lysosomes. accumulation, causing functional impairment of cells, tissues and organs. ERT for Pompe disease is currently the only effective treatment. The deficient enzyme (GAA) or a genetically modified copy is infused into the body so that it can successfully convert glycogen into glucose (glycogenolysis). This process allows the body to properly utilize sugar and produce energy at the cellular level.
