### Report Overview

Macroporous chelating resin is a type of high-performance ion exchange resin characterized by its large pore size and chelating properties. It is specifically designed for the selective adsorption and separation of metal ions from complex mixtures, such as wastewater streams or industrial processes. The macroporous structure of the resin allows for high diffusion rates and fast kinetics, enabling efficient contact between the resin and the metal ions. Chelating groups within the resin form stable complexes with specific metal ions, making it an effective tool for metal ion recovery, purification, and concentration. This type of resin is widely used in various applications, including environmental remediation, precious metal recovery, and the pharmaceutical industry, due to its high selectivity, capacity, and stability.
