## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Magnetic Angle Encoder IC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Magnetic Angle Encoder IC is a type of integrated circuit used to measure the angular position of a rotating object (such as a motor shaft) using magnetic sensing technology. It converts the mechanical angular motion into an electrical signal that can be read by microcontrollers or control systems for precise motion control. The Magnetic Angle Encoder IC market is undergoing robust growth, driven by the global rise in industrial automation, the increasing adoption of electric vehicles (EVs), and the expanding use of robotics and smart consumer electronics. Magnetic encoder ICs are essential components in systems that require accurate motion sensing, rotational angle measurement, and position feedback, offering advantages like contactless operation, high reliability, and resistance to harsh environmental conditions. Magnetic Angle encoder ICs use magnetic field sensing technology? primarily Hall-effect, AMR (anisotropic magnetoresistive), or TMR (tunneling magnetoresistive) sensors? to detect the angular or linear position of a rotating or moving object. These ICs measure changes in the magnetic field generated by a nearby magnet and convert them into a digital or analog output that represents position, speed, or direction. Common output formats include analog sine/cosine, PWM, SPI, I<sup>2</sup>C, or ABZ quadrature signals.

1. Rapid Growth in Industrial Automation  
The global push toward Industry 4.0 and smart factories is significantly increasing demand for magnetic encoder ICs. These ICs are widely used in servo motors, robotic joints, conveyors, and CNC machinery for real-time position and motion feedback. Compared to optical encoders, magnetic variants are more robust and suitable for industrial environments filled with dust, oil, and vibration.
2. Electrification of Transportation  
The automotive sector, particularly the EV segment, is a major driver of

magnetic encoder IC demand. These encoders are essential in: Automotive-grade magnetic encoders offer benefits like wide temperature ranges, high EMC immunity, and compact footprints, making them ideal for integration into modern vehicle platforms. 3. Miniaturization and Integration To meet the space constraints of wearables, medical devices, consumer electronics, and mobile robotics, manufacturers are producing miniature encoder ICs that integrate signal processing, zero-position programming, self-calibration, and digital interfaces. This trend is accelerating adoption in areas where space and power efficiency are crucial.

The global Magnetic Angle Encoder IC market size was estimated at USD 240.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
