Abstracts

The magnetic flip column liquid level gauge is developed based on the buoyancy principle and magnetic coupling. When the liquid level in the measured container rises and falls, the float in the main tube of the liquid level meter also rises and falls. The permanent magnet in the float is transmitted to the field indicator through magnetic coupling, driving the red and white columns to flip 180°. When the liquid level rises, the flip column turns from white to red. When the liquid level drops, the flip column turns from red to white. The junction of red and white on the indicator is the actual height of the medium liquid level in the container, thereby realizing the liquid level. instructions.

The global Magnetic Flip Column Liquid Level Gauge market size was estimated at USD 85.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.35% during the forecast period.
