Magnetic Flux Leakage Testing Systems is a non-destructive testing technology used to detect defects in metallic materials. This system uses the principle of electromagnetic induction to detect magnetic abnormal areas in the material by applying a magnetic field to the surface of the material being tested. When there are defects on the material surface (such as cracks, corrosion, etc.), the magnetic field will leak, resulting in abnormal signals.

The global Magnetic Flux Leakage Testing Systems market size was estimated at USD 520.75 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
