Report Overview

A magnetic crane is a crane system that uses magnets to lift and move loads. The magnet is mounted on the crane hoist and can be opened and closed to extract or release the load as required. These cranes typically operate on an overhead track system and can move loads horizontally and vertically. The strength of the magnets used in these cranes can vary depending on the weight of the load being lifted. Some cranes use permanent magnets and others use electromagnets which require a source of electricity.
