Abstracts

Magnetic particle non-destructive testing service is a non-destructive testing service that detects surface and near-surface flaws in ferromagnetic materials like iron and steel. This is a quick and cost-effective method widely used for inspecting components in industries like aerospace, automotive, and manufacturing. The development of magnetic particle non-destructive testing services is driven by multiple factors, including increasingly stringent industrial safety regulations, higher quality requirements for high-end equipment manufacturing, increased maintenance demands due to the aging of in-service equipment, and the marketization of third-party testing. With regulations mandating regular non-destructive testing of critical components in pressure equipment, rail transportation, and energy facilities, magnetic particle testing, as a low-cost, convenient, and highly sensitive surface defect detection method, has become a necessity. Simultaneously, the increasing reliability requirements of components in industries such as wind power, aerospace, and automotive are driving the application of high-precision services such as fluorescent magnetic particle testing and automated MT. Furthermore, the increasing emphasis on predictive maintenance and full lifecycle quality management by enterprises as older industrial installations enter a period of high failure risk further expands the demand for testing services. In addition, the rapid rise of qualified third-party testing organizations has accelerated the professionalization, standardization, and scaling up of magnetic particle testing services.

The global Magnetic Particle Non-Destructive Testing Service market size was estimated at USD 1590.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
