Abstracts

Magnetic tiles for brushless motors are a permanent magnet material used in brushless motors, usually made of NdFeB or ferrite. The function of the magnetic tiles used in brushless motors is to generate a stable magnetic field to drive the rotor to rotate. The shape and number of poles of magnetic tiles for brushless motors vary according to different motor types and performance requirements. Generally speaking, the central angle of the magnetic tiles used in brushless motors is smaller to adapt to the multi-pole magnetization method. The advantage of magnetic tiles for brushless motors is that they can improve the efficiency, reliability, lifespan and controllability of the motor. The disadvantages are that they are more expensive and difficult to maintain. Magnetic tiles for brushless motors are widely used in aerospace, automotive, virtual reality and other fields.
