## Abstracts

The Magnetically Controlled Capsule Endoscopy (MCCE) System is an innovative medical imaging technology designed for non-invasive gastrointestinal examinations. By combining magnetic navigation technology with a micro-camera capsule, patients can undergo a comprehensive examination of their digestive tract simply by swallowing a small capsule. Physicians use an external magnetic control device to precisely navigate the capsule inside the body, capturing high-resolution images that enhance diagnostic accuracy. Compared to traditional endoscopy, MCCE offers advantages such as ease of operation, painlessness, and no need for anesthesia. It is an ideal choice for diagnosing gastrointestinal conditions like gastritis, ulcers, and polyps. This technology is particularly beneficial for patients who are uncomfortable with or contraindicated for traditional endoscopy, significantly improving the comfort and safety of the examination process. The Magnetically Controlled Capsule Endoscopy System is gaining recognition in the endoscopy field, particularly for diagnosing gastrointestinal diseases. This non-invasive technology addresses the discomfort associated with traditional endoscopic procedures, making it appealing for patients. Rising awareness of digestive health and the growing prevalence of related diseases have fueled demand. However, the high cost and technological barriers currently confine its usage primarily to advanced medical facilities in developed regions. As technology advances and production costs decrease, the system is expected to see broader adoption. Integrating artificial intelligence for diagnostic support will enhance accuracy and efficiency. Additionally, the growing trend of healthcare data digitization may lead to integration with the Internet of Medical Things (IoMT), offering new solutions for remote medical care. With supportive policies and increased market outreach, emerging economies could become promising markets. Key drivers include an aging population, increasing rates of chronic diseases, and rising demand for precision medicine. However, the market faces significant challenges. High

equipment and maintenance costs limit widespread adoption, while disparities in medical resources and training requirements pose additional barriers. Moreover, patient acceptance of new technologies and the complexity of regulatory approvals remain potential obstacles to growth.

The global Magnetically Controlled Capsule Endoscopy System market size was estimated at USD 437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.60% during the forecast period.
