Report Overview

A Mains Isolation Relay is an electrical component designed to provide a safe and reliable means of disconnecting power from a circuit. It functions by opening or closing the main power supply lines, effectively isolating the electrical system from the power source. This device is crucial in applications where safety is paramount, such as in industrial control systems, power distribution panels, and electrical installations. The relay operates based on a control signal, which can be manual or automated, and is typically triggered by a switch or a control system.
